MotionRepo

Your code, turned into a launch.

Launch videos and ready-to-send documents, made straight from your product's code.

A real frame from a video MotionRepo made on its own

THE PROBLEM

Great products often launch quietly.

Videos take too long

Scripting, recording and editing pull people away from building.

Documents fall behind

The sales sheet still describes last quarter's product.

Builders are busy

The people who know the product best have the least time to explain it.

THE IDEA

Everything your launch needs is already in your code.

The screens, the features, the words on every button. MotionRepo reads them and turns them into videos and documents anyone can understand.

HOW IT WORKS

Three steps. You do two of them.

01

Connect

Sign in with GitHub and choose which projects MotionRepo may read.

02

MotionRepo makes it

It reads the product, writes the script, and builds the videos and documents.

03

Review and share

Watch, download and post. Want a change? Write a short note.

WHAT YOU GET

One project in. A whole launch out.

Launch teaser

15 TO 25 SECONDS

A punchy clip for the announcement post and social media.

Walkthrough video

30 SECONDS TO 3 MINUTES

A guided tour of the product, scene by scene, with an optional voice.

Three documents

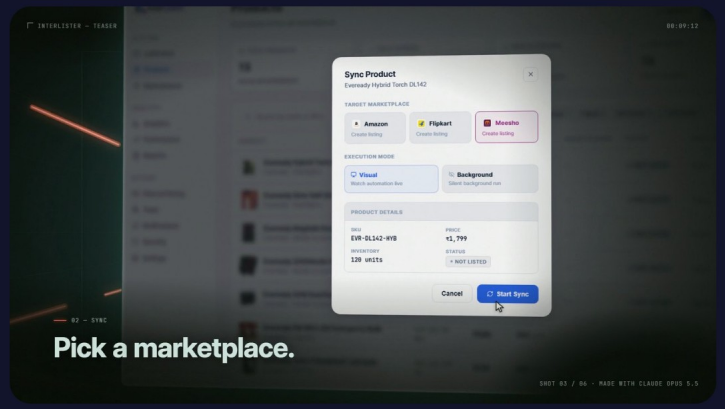

READY TO SEND

A user guide, a technical guide and a sales deck, written from the product itself.

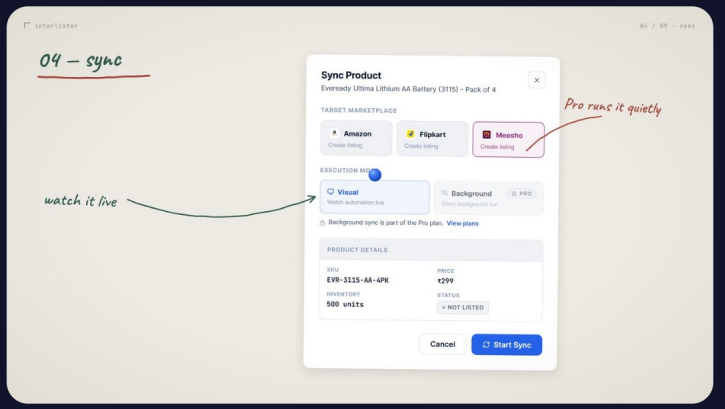

REAL OUTPUT

One product. Four looks.

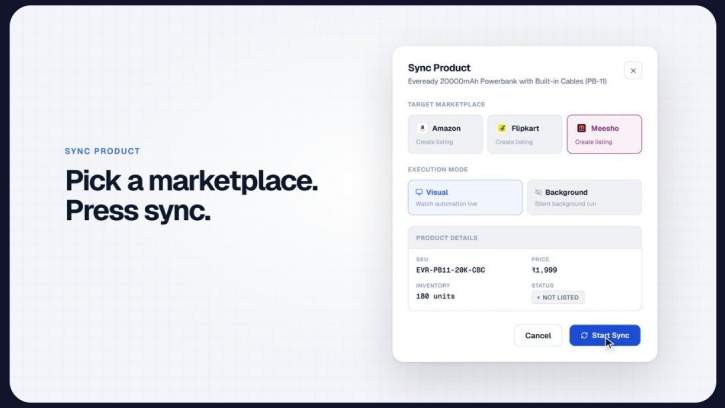

Every frame here was made by MotionRepo from the same real product. Nobody edited them.

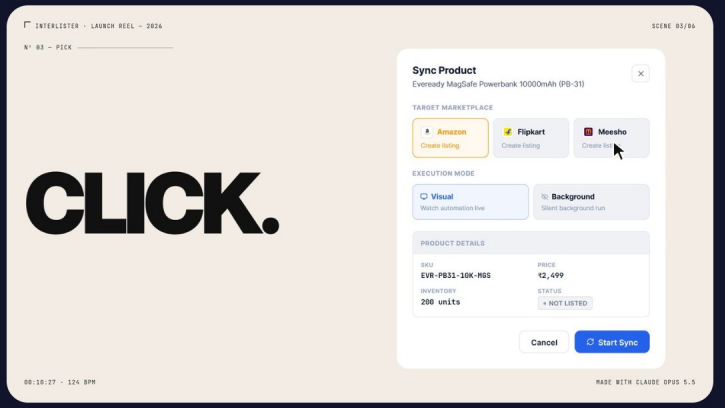

Cinematic

Sketchbook

Polished

Bold

YOU STAY IN CONTROL

Your style, your say.

Pick a look

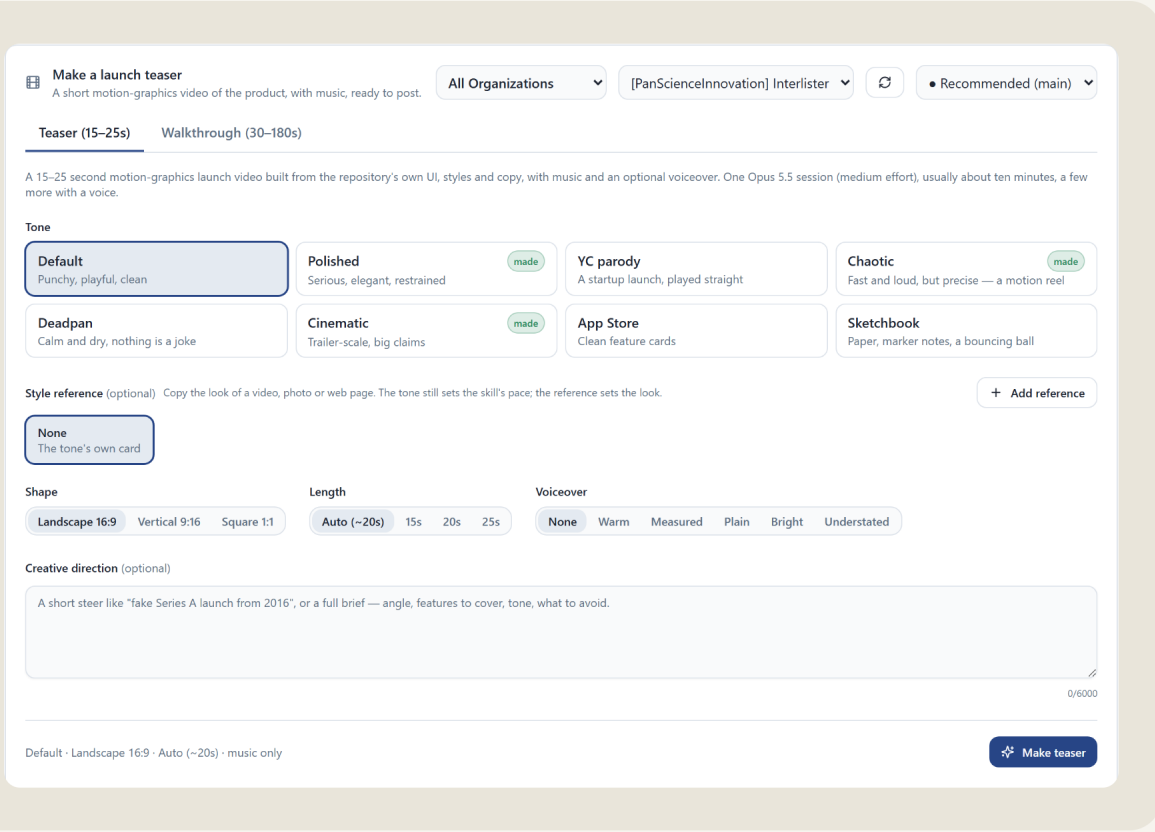

Eight tones, from polished to playful, or match a video you like.

Pick a shape

Wide, vertical or square, with or without a voice.

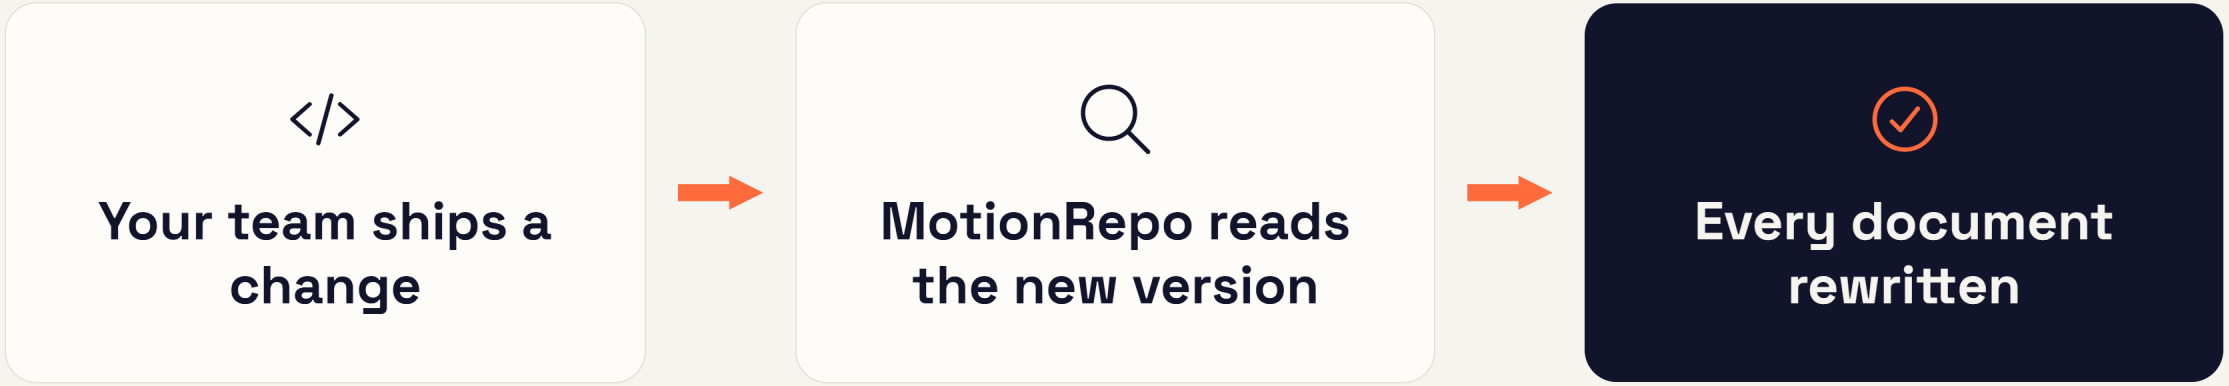

Change it with a note

“Slower, and show the pricing page.” The previous version is always kept.

ALWAYS UP TO DATE

Documents that never go stale.

Turn it on once, and each update to the main product rewrites the user guide, the technical guide and the sales deck. Or refresh them yourself in one click.

WHO IT IS FOR

For teams that ship faster than they can explain.

Product launches

A teaser for the announcement, a tour for the website.

Sales teams

A sales deck that matches the product you sell today.

Release updates

This week's changes as a 20-second clip for social posts.

Agencies

Hand clients a full launch kit along with the product.

Customer onboarding

A user guide and a walkthrough new customers can follow.

Investor updates

Show what you built this quarter in two minutes.

WHAT CHANGES

Before and after MotionRepo.

	The usual way	With MotionRepo
A launch video	Scripting, recording and editing	A teaser in about ten minutes
Product documents	Written by hand, outdated after the next update	Written from the product, refreshed with it
Who does the work	Your engineers and marketers	MotionRepo; you review
Making a change	Back to the editor, often from scratch	A one-line note; the last version is kept

BUILT WITH CARE

Your product stays yours.

Read-only

MotionRepo reads your code. It never changes it.

You choose

Tick exactly which projects it may see, and change that any time.

Checked before you see it

Every video is checked first. If one fails, the last good version stays.

Or run it yourself

Enterprises can host MotionRepo on their own servers.

PLANS

Start free. Grow when you are ready.

Free Trial

Free

for 14 days · no card

- 6 credits
- 1 project
- Videos up to 1 minute

Starter

₹3,199

a month · one person

- 15 credits a month
- Up to 5 projects
- Full HD, no watermark

FOR TEAMS

Pro

₹13,199

a month · team of five

- 50 credits a month
- Up to 25 projects
- Priority queue

Enterprise

Let's talk

self-hosted license

- Runs on your servers
- No credit limit
- Everything in Pro

Credits pay for what you make: all three documents 1, a teaser 2, a walkthrough 3 to 6.

MotionRepo

You ship the product. We'll make the launch.

Try it free for 14 days on your own product. No card needed.
